### AWEX-EMI Percentile rankings

Percentiles rank the current EMI for the given period. A percentile of 0 indicates the EMI is at the lowest point, A percentile of 50 indicates the EMI is the median price, A percentile of 80 means the EMI has been lower 79% in the period (or higher 19% of the time in the period).

The wool market took some guidance from the positive finish last sale and gained 17 cents to 1128 cents this week and is now only 1.5% below the 12-month peak made in December. A smaller offering than last sale was met with good competition from the outset and made consistent gains over both of the first two days. The support during this part of the series pushed the Micron Price Guides in the Merino range (16.5 to 24.0 microns) 20 cents higher. The final day (Thursday) lost some of the earlier momentum, mainly in the broader microns where prices eased back slightly. Buyers still maintained an appetite for the finer microns however, and these were firm through to the close. Support was especially evident for the better types which proved to be the biggest contributors for the week. Best style and those testing in the 40nkt range were the main focus over the three days while a handful of Spinner types were met with keen competition on the last day and rose 20 to 30 cents. Merino Skirtings also closed around 20 cents higher, mainly on the back of support for the best length and low vm types. Another large offering of Crossbreds rallied 10 to 20 cents for the sale and now has 28 and 30-microns within a few cents of three-year highs. Locks and Crutchings also gained 10 to 20 cents for the week but managed to maintain buyer interest through to the end of the week.
