CATALOGUE INFORMATION

Identity : The identity detail of an animal being sold describes the Registered Flock (2 or 3 letter prefix), the year of drop (the last two numbers), and the tag number (4 numbers). The animal's sire and dam are listed after the animal's identity. Additional information is reported on an animal's Flock Book (Registered Certificate - that is dam age, birth and rearing type, and birth date. The sire and dam plus the birth details are accounted for in the animal's EBVs and Index.

When an animal is purchased the seller is required to give the buyer the animal's Flock Book Certificate.

Final Grade : All of the animals for sale are registered.

Index : An animal's Index is the combined value for measured traits. An Index Value of 100 is the average performance of the year 2000 drop Registered Dohne progeny. Numbers above 100 are higher performing – a value of 120 to 130 is at the higher end of the present range.

Trait EBVs : All progeny in a mating group must be recorded for Body Weight, Eye Muscle Depth (mm), Fat Depth, Greasy Fleece Weight, Fibre Diameter, and Coefficient of Variation of Fibre Diameter – other traits are optional. Each measured trait is reported as a Dohne EBV (deviation from the Dohne Registered flocks' average performance of the 2000 drop progeny – the average is expressed as 0.0). An EBV describes the expected performance of the animal's progeny.

BW : Body Weight (kg)

MD : Eye Muscle Depth (mm)

Fat : Fat Depth (mm)

FW : Greasy Fleece Weight (percentage)

FD : Average Fibre Diameter (micron)

CV : Coefficient of Variation of Fibre Diameter (percentage)
