

Data Submission Calender

A Data Submission Calender has been developed to allow a breeder to easily identify the Dohne “Analysis” and “Cut off” dates.

Explanation of the headings on the Data Submission Calender

Analysis – the Dohne analysis is carried twice a month by Sheep Genetics after the 7th and 21st of each month. The Dohne database needs to process breeder data and have the data to sheep Genetics by 5pm on these dates or the Friday before if the 7th or 21st falls on a weekend.

Cut-off Date – the latest date by which the breeder must have their data in to the Dohne database for each analysis. Data submitted past this Cut-off Date will be run in the following analysis 2 weeks away.

Data Submission Calender

When can you evaluate traits?

Progeny Group

All progeny of the same sex in a mating group (all progeny born in a period that is no longer than 35 days) must be recorded for the required traits in the correct manner.

Stage 1 (Weaner) Evaluation

Weaning WT must be evaluated between 42 to 120 days old (1.5 to 4.0 months old) and stage 1 Grade is optional.

Stage 2 (Yearling) Evaluation

FD and CV must be evaluated between 300 to 550 days old (10 to 18.3 months) with a minimum of 150 days (5 months) wool growth. FW must be evaluated between 270 to 540 days old (9 to 18 months) with a minimum of 180 days (6 months) wool growth

Progeny are required to be evaluated for bodyweight (WT) in the 120 to 300 days post weaning age period. The large majority of progeny in a group on the day the group are evaluated must have a WT over 30kgs. If eye muscle depth (EMD) and fat depth (Fat) are going to be evaluated these traits also should preferably be evaluated in the post weaning age period and have body weight recorded but are not compulsory.

All Stage 2 data, Assessors Form and Request Form must be forwarded to the database.

Dohne Database 2018 Analysis Cut-Off Calender

Analysis	Cut-Off Date
5 January 2018	2 January 2018
19 January 2018	16 January 2018
